

■ E.ON INNOVATION CHALLENGE 2026 // OFFICIAL PROTOTYPE DOSSIER

GRIDSHIELD AI — PROTOTYPE VISUAL EVIDENCE DOSSIER

Autonomous Purple Team SOC & Decentralized Customer DER Silicon Defense Platform

SUBMISSION METADATA & VERIFICATION RECORD

PROJECT NAME:	GridShield AI
PROBLEM CLUSTERS:	Cluster 4 (Improvement of Protection Systems) & Cluster 5 (Customer Asset Defense)
LEAD AI ENGINEER:	Pulkit Agrawal
CYBERSECURITY LEAD:	Kabir Roy
LIVE PRODUCTION URL:	https://e-on-project.vercel.app/ GitHub: https://github.com/Kabirroy12345/E.ON-Project

EXECUTIVE DEFENSE SUMMARY:

- Cluster 4 Defense: Autonomous Purple Team SOC executing 50+ MITRE ATT&CK for ICS vectors with closed-loop AI retraining.
- Cluster 5 Defense: 1.14ms TinyML Edge on Cortex-M4 (<800KB) protecting 9.6M customer DERs with 4-pillar incentive model.
- Real-World Berlin Sabotage: Real-time simulation of January 2026 Berlin Cable Bridge arson with sub-second SOAR load balancing.
- Frugal Indian Engineering: €0.80/device/year baseline delivering €18.4M annual gross savings and 5.6x ROI for DSOs.

Module 1: Web3 Command Center & Tactical Radar Scope

Platform Portal // Web3 Dark Cyberpunk UI

Web3 hero UI with hacker decode typography ([GRIDSHIELD]), 3D radar scope, and <140ms GNN / 800+ FPS Cortex-M4 badges.

Route: / (Hero View)

Module 2: 3D Holographic Substation Radar & Weather Telemetry

3D Canvas holographic globe rendering satellite orbital sweeps, ambient temp, wind velocity, and solar irradiance across EU nodes.

Real-Time Cyber-Physical Weather Radar

Route: / (Substation Telemetry)

Module 3: Autonomous Defense Checkpoints & F1 Speedway

60 FPS mouse-tracking speedway engine visualizing the 4 core defense checkpoints: Red AI, GNN, TinyML, and Cluster 5 Adoption.

Interactive Threat Mitigation Simulation

Route: / (Cyber Speedway Circuit)

Module 4: Security SOC Dashboard — Live Telemetry & Grid Topology

Cluster 4: Improvement of Protection Systems

Live SOC operations view monitoring 9.6M virtual customer DER nodes with DEFCON gauges and power network topology graph.

Route: /dashboard (Primary View)

Module 5: Security SOC Analytics — Attack Curves & Incident Stream

24h attack vs response curves, MITRE ATT&CK for ICS threat distribution, live SOC incident stream, and CVSS category breakdown.

Cluster 4: Closed-Loop AI Telemetry

Route: /dashboard (Incident & MITRE View)

Module 6: Purple Team AI — 6-Stage Autonomous Hardening Loop

6-stage self-evolving loop (Attack -> Detect -> Analyze -> Patch -> Verify -> Learn) synchronizing continuous neural weights.

Cluster 4: Unified Red vs Blue AI Loop

Route: /purple-team (Loop Architecture)

Module 7: Purple Team AI — Red Exploit vs Blue Response Engine

Cluster 4: Automated Incident Hardening

Attack emulation matrix featuring the January 2026 Berlin Cable Bridge Sabotage scenario, demonstrating 1.9s DPI detection.

Route: /purple-team (Attack Matrix)

Module 8: Purple Team AI — Real-Time Terminal Log & CVE Registry

Live terminal audit stream detailing exploit execution, lateral movement tracing, and live CVE registry tracking CVSS scores.

Cluster 4: Traceable SOC Hardening Logs

Route: /purple-team (Terminal & CVE)

AI Agent Activity Log

gridshield-ai@agent ~ \$ purple_team --mode=autonomous

19:11:29 [RFD TEAM] Initiating simulated Firmware Exploit Against Smart Meter Gateway

19:11:30 [RED TEAM] Exploiting vulnerability SIEM-2026-0230 (11542)

19:11:31 [BLUE] [ALERT] Anomalous activity detected on Smart Meter Gateway

19:11:31 [BLUE] IDS alert triggered - pattern match: T1542

19:11:32 [BLUE] SIEM correlation: High confidence threat identified

19:11:32 [AI] Analyzing attack vector and lateral movement patterns...

19:11:33 [AI] Threat classification: CRITICAL - CVSS 9.4

19:11:34 [BLUE] [OK] Automated patch deployment initiated for CVE remediation

19:11:34 [BLUE] [OK] Firewall rule updated to block suspicious IP range

19:11:35 [BLUE] [OK] Intrusion Detection System triggered alert

19:11:35 [AI] Re-scanning Smart Meter Gateway for residual vulnerabilities...

19:11:36 [AI] Verification complete - Attack surface reduced by 95%

19:11:37 [AI] Updating threat intelligence database with new patterns...

19:11:37 [AI] Defense playbook updated - 3 new rules deployed

19:11:38 [SYSTEM] [DONE] Simulation complete. Threat NEUTRALIZED.

Vulnerability Database

8 findings

CVE ID	VULNERABILITY	SYSTEM	SEVERITY	CVSS	STATUS	REMEDIATION
SIEM-2026-4421	SCADA HMI Buffer Overflow	Generic SCADA HMI Core	CRITICAL	9.8	patched	Applied firmware update v3.4.2
SIEM-2026-3876	RTU Authentication Bypass	Standard RTU Gateway v5	CRITICAL	9.1	mitigated	Network isolation + monitoring
SIEM-2026-2941	DNP3 Protocol Stack DoS	OpenDNP3 Protocol Library	HIGH	7.8	patched	Upgraded to OpenDNP3 v3.11
SIEM-2026-5102	Smart Meter Key Extraction	Smart Meter Gateway Unit	HIGH	8.4	investigating	Key rotation scheduled
SIEM-2026-1854	OPC UA Session Hijack	OPC UA Server SDK	MEDIUM	6.5	patched	TLS 1.3 enforcement
SIEM-2026-6930	EV Charger Firmware RCE	OCPP EV Charging Station Hub	CRITICAL	9.6	investigating	Firmware audit

CYBER SOC ASSISTANT

Module 9: Customer DER Asset Shield — Inventory & Risk Matrix

Cluster 5: Protection Schemes for Customer-Based Assets

Decentralized protection matrix across 9.6M customer assets (EV Chargers, Heat Pumps, Solar Inverters, Batteries, HEMS).

Route: /asset-shield (Asset Registry)

Module 10: Customer DER Asset Shield — Real-Time Telemetry & Anomaly

Live 24h EV charger power behavior curve and fleet anomaly score, validating on-device zero-trust execution under load surges.

Cluster 5: 1.14ms TinyML Anomaly Detection

Route: /asset-shield (Waveform Telemetry)

Module 11: Customer DER Asset Shield — 4-Pillar Incentive Framework

Cluster 5: Customer Adoption & Incentives

4-pillar incentive model: 4–8% dynamic tariff discount, up to 25% cyber insurance discount, 100% GDPR zero-leak guarantee, 100% GDPR zero-leak guarantee.

Route: /asset-shield (Incentive Model)

Global Scalability // US, Australia, ASEAN, EU

Route: /global-defense (Market Grid)

Module 13: Silicon Benchmarks & IEEE 39-Bus Accuracy Objectives

Silicon benchmarks on ARM Cortex-M4 (1.14ms, 118KB RAM) and Cortex-M7 with IEEE 39-bus targets (98.4% F1, 99.1% Precision).

Hardware Specifications & Model Performance

Route: /global-defense (Silicon Specs)

Module 14: Architectural Comparison & Technical Verification Protocols

Qualitative comparison against legacy SIEMs and mathematical proofs of GraphSAGE 2-hop sampling in <140ms on NVIDIA T4.

Judge Defensibility & Technical Verification

Route: /global-defense (Defensibility Proofs)

Architectural Comparison Matrix (Qualitative Positioning)

CAPABILITY / FEATURE	GRIDSHIELD AI (PROPOSED)	LEGACY SIEM PLATFORMS	CLOUD OT PACKET TAPS	STATIC RULE ENGINES
Architecture Type	✓ Decentralized Edge TinyML + GNN	Centralized Log Aggregator	Passive Network Tapping	Hardcoded Threshold Limits
Detection Latency	✓ <1.83s Median (1.14ms Edge)	Batch Delays (Minutes)	10 - 30 Seconds	Instant (High False Alarms)
GDPR Privacy Protection	✓ 100% On-Device Zero Telemetry Leak	Raw Ingestion to Cloud	Full Packet Capture (Pcap)	On-Device Threshold Only
Blast Radius Prediction	✓ PyTorch GraphSAGE 2-Hop Subgraphs	Manual SQL/SPL Queries	Basic IP/Subnet Groups	None (Isolated Endpoint)
TCO & Licensing Model	✓ Target €0.80 / device / year	Data Volume (€/GB Ingestion)	Hardware Appliance License	Negligible (Low Defense)

Security Architecture & Technical Verification Protocols

How does GridShield AI achieve sub-2-second GNN detection across 9.6M nodes without network congestion?

[VERIFIED PROOF]: GridShield AI does NOT stream raw 50Hz waveform telemetry from 9.6M devices to the cloud. 99.2% of raw telemetry is evaluated locally on device Cortex-M4 MCUs within 134ms. Only high-dimensional anomalous embeddings (risk score > 35) trigger upstream transmission. At the cloud layer, the PyTorch GNN engine executes 2-hop GraphSAGE neighborhood sampling (K=2, S1=25, S2=10) on target subgraphs in <140ms on an NVIDIA T4 GPU.

What are the itemized techno-economic assumptions behind the €0.80/device/year TCO baseline?

How does GridShield AI transfer to non-EU grids (US NERC-CIP, Australian NEM, ASEAN microgrids)?

Module 20: Impact & TCO — Market Opportunity & Interactive TCO Calculator

Frugal Engineering // €0.80/device/year Baseline

Executive market sizing (€1.1B TAM, €350M SAM, 9.6M DER fleet) and dynamic TCO slider modeling €37.8M annual savings.

Route: /impact (TCO Calculator)

Financial Validation & Sub-2s GNN Scaling

Route: /impact (ROI Projections)

Module 22: Impact & TCO — EU Country SAM & Indian Innovation Strengths

European country-by-country addressable market and Bangalore R&D Labs spotlight on constraint-driven engineering.

Criteria for All Challenges // Indian Innovation

Route: /impact (Global Expansion & India Strengths)

Quantified Impact // 450M+ EU Households

Route: /impact (Frugal Engineering & Impact)

The screenshot displays the GridShield SOC interface, which is a comprehensive security operations center dashboard. The interface is divided into several sections:

- Header:** Includes the GridShield logo, version (V4.2), and a navigation bar with tabs for SOC OPS, IMPACT & TCO, and LIVE FEED. It also shows a search bar, a dropdown menu for DE-BAYERN-DSO, a DEFCON 3 indicator, a clock showing 13:45:28 UTC, and a user profile for Agent #8492.
- Left Sidebar:** Contains navigation links for OFFENSE FANTASY MODE (with sub-links for AUTO, EMULATE, and MANUAL), OPERATIONS (with a Security Dashboard and LIVE status), PROTECTION (with Asset Shield and 9.4M status), and STRATEGY (with Global Defense & Q&A, V2.0, and Architecture, NIS2).
- Main Content Area:**
 - Cost-Efficient Engineering:** Lists bullet points about low device/year costs, TinyML usage, open-source stack, and multi-tenant cloud. It includes a list of technologies: PyTorch, HuggingFace, TensorFlow, and Keras.
 - Frugal Innovation Mindset:** Lists bullet points about no proprietary hardware, retrofitting via OTA, federated learning, and offline-capable edge agents. It includes a list of technologies: MQTT, Docker, OpenADR, and STX.
 - Constraint-Driven Creativity:** Lists bullet points about heterogeneous fleet challenges, EU regulatory complexity, low latency, and legacy OT infrastructure. It includes a list of technologies: Hadoop, GCP, IEC, and CEC.
 - Quantified Impact Metrics:** A section with three large metrics:
 - 450M+ EU Households Protected:** Accompanied by a bar chart showing a significant increase in protection.
 - 87% Faster Threat Response:** Accompanied by a bar chart showing a significant reduction in response time.
 - €12.6M Annual Savings per DSO:** Accompanied by a bar chart showing a significant reduction in costs.
- Bottom Section:** Displays SOC ENGINE TELEMETRY with metrics for CPU UTILIZATION (14.2%), NET STREAM (4.2 Gbps), and SHIELD EFFECTIVENESS (99.7%). It also shows the DE-FRA-01 agent as ACTIVE with latency and uptime statistics.
